

# FCT Finds Fraud

## Cyber Attacks

INTERNET  
service

01

### EMAIL OR INTERNET FRAUD

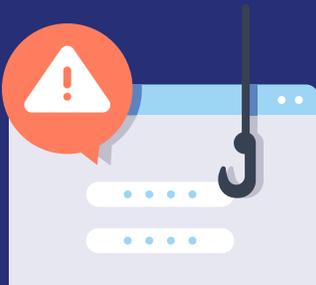

Not every email, link, or website is secure. Clicking/interacting with fraudulent sites and emails gives hackers access to information on your electronic device.

02

### IDENTITY THEFT

An identity can be stolen online. Oversharing and sending confidential information unsecured puts your identity at risk. All of the information is now stored and saved virtually.

03

### PHISHING AND CYBEREXTORTION

Phishing emails/messaging deceive victims into sharing personal data such as logins and financial details. Along with this, cyberextortion is common, as hackers may blackmail victims into ransom.

04

### MALWARE AND VIRUSES

Malware and viruses can be downloaded several different ways. Always be suspicious of unfamiliar links, pop ups, and websites.
